Instructions for Issuing Batch Record:

1. Record Work Order number and QTY.

2. Sign and date below indicating batch record has been properly issued. A second individual must sign and date to verify batch record was properly issued.

Work Order No. _____

Batch Record Issued By: _____ Date: _____

Work Order Qty. _____

Batch Record Verified By: _____ Date: _____

Signatures of Personnel NOTE: A signature on this record indicates that you have read and understood the process entailed within this record and are trained in all functions that are performed. All personnel who write on this batch record are required to sign below.

PROPOSED COMMERCIAL RECORD****LOT NO** _____

Pharmasol Item #	8012010	Customer	Aucta Pharmaceuticals, Inc.	DCO	20-0182	Rev No.	0
Customer Part #	N/A	Description	Clobetasol Propionate Foam 0.05%	Size	50g	Page 7 of 26	

FILLING INSTRUCTIONS

1. Place the cans inside the pucks on the conveyor.
2. Apply lot number to bottom of can. Lot number must be clear and legible.
3. Charge concentrate. Notify mechanic immediately of any problems related to filling (low, high, overflow, spillage, etc.)
4. Verify vacuum is on. Place valve onto cans. Use caution, so there is no damage, or bending to the Valve Stem. Crimp the Valve to can under vacuum. Notify mechanic immediately of any problems related to crimping.
5. Charge propellant. Notify mechanic immediately of any obvious problems (i.e. spillage).
6. Weigh 100% of the units and discard all units that fall outside of the gross weight limits.
7. Inspect the can / valve for leaks while units are submerged in the heat tank. The formation of a constant stream of bubbles coming from the crimped area of the container or around the stem of the valve should be considered a leaking unit. Identify and segregate any rejected units. Notify the mechanic immediately of any rejects.
8. Apply actuator to the unit.
9. Monitor and record product variables and product attributes on the appropriate section of the record.
10. Monitor and record weights on the appropriate section of the record.
11. Monitor and record in-process testing on form 090-3-007.

Pharmasol Item #	8012010	Customer	Aucta Pharmaceuticals, Inc.	DCO	20-0182	Rev No.	0
Customer Part #	N/A	Description	Clobetasol Propionate Foam 0.05%	Size	50g	Page 8 of 26	

PACKAGING INSTRUCTIONS

1. Apply 2D Serialized datamatrix barcode to the bottom flap of the unit carton on the unvarnished area.
 - 1.1. If the code is distorted or unreadable, remove the contents of the unit carton and place them into a new unit carton.
2. Each item level serialization system includes a GS1 2D data matrix with the following Application Identifiers (AI) in the following order:

Figure 1 (2D Datamatrix Example)

(01) GTIN (XXXXXXXXXXXXXXXX) - Static Field)

 - (21) Serial Number (Dynamic Field)
 - (17) Expiration date (Format: MMM YYYY)
 - (10) Lot Number (Format: XXXXX)

Enter Example Here
3. Assemble master cartons right side-up and place 12 unit cartons into the master carton.

Comments:

LOT NO _____

Pharmasol Item #	8012010	Customer	Aucta Pharmaceuticals, Inc.	DCO	20-0182	Rev No.	0
Customer Part #	N/A	Description	Clobetasol Propionate Foam 0.05%	Size	50g	Page 9 of 26	

4. Aggregate the 12 units present in the master carton and a master carton label will be printed.

4.1. The printed label is a 3" x 5" and the Case Level serialization includes a GS1 2D data matrix and two linear barcodes with the following Application Identifiers (AI) in the following order: (See Figure 2)

GS1 2D data matrix:

- (01) GTIN (Encoded)
- (21) Serial Number (Encoded)
- (17) Expiration date (Encoded)
- (10) Lot Number (Encoded)

Figure 2 (Case Label Example)

Linear Barcode 1:

- (17) Expiration date (Encoded and Human Readable)
 - Format (YYMMDD) confirm the day is the last day of the month
- (10) Lot Number (Encoded and Human Readable)
- (30) Quantity (Encoded and Human Readable)

Enter Example Here

Linear Barcode 2:

- (01) GTIN (Encoded and Human Readable)
 - (XXXXXXXXXXXXXXXXXX - Static Field)
- (21) Serial Number (Encoded and Human Readable)

5. Apply case label to the long panel on bottom left corner of the case.

6. With the handheld computer, scan each case 2D datamatrix to aggregate the cases. A 4 x 6" pallet label will be printed. (See Figure 3)

7. The Pallet Level serialization system will print and encode a linear barcode with the following Application Identifier (AI) in the following order:

Linear Barcode 1:

- (00) 5 Series SSCC18 Number (Encoded and Human Readable)
 - 20807105 is static and all following digits are the unique identifiers.

Figure 3 (Pallet Label Example)
